PROGRAM OVERVIEW

Dentistry has fully embraced the digital age and its integration into one of the oldest treatments in dentistry is proof that it is here to stay.

Computer-aided design and computer-aided manufacturing (CAD/CAM) of complete dentures was introduced following the success of CAD/CAM in implant and fixed prosthodontics.

CAD/CAM complete dentures have seen exponential growth in the dental market with the number of commercially available digital denture systems growing every year. Interest in CAD/CAM has also been affected by a reduction in the number of dental laboratory technicians with extensive experience and expertise with traditional fabrication processes.

This presentation will cover key aspects related to the current status of computer technology for the fabrication of complete dentures.

Digital Denture Workflows for the Contemporary Dentist: Current Treatment Options and Materials

- Attendees will gain insight into how a digitally driven approach to dentures enables practices to operate more effectively while delivering advanced solutions that meet today's patient expectations.
- Identify key digital denture technologies and workflows that improve clinical efficiency, consistency, and restorative outcomes
- Apply practical workflow strategies to deliver high-quality dentures that align with modern patient expectations for speed, comfort, and predictability
